LANGUAGES: Spanish, English, French

COMPANY INFORMATION:

ACXT was set up as an association of professionals with the aim of providing a systematic and open approach to architectural design. More than four hundred people work at ACXT today, more than half of them being architects. Engineers are also involved: civil, mechanical, electrical, agricultural…, but also landscapers, urban designers, biologist, experts in acoustics, illumination, telecommunications, costs, building site organization, graphic designers or IT technicians. Due to the problems caused by specialization and the development of technology, we seek solutions that integrate them right from the beginning, at the project conception stage.

We approach our work from a wider perspective than just “design”, by offering a broader perspective and analysis for each project.

Common themes run across the work of the whole practice – among them simplicity, attention to detail, co-ordination – but individual offices are given autonomy to develop solutions best suited to their local clients.

ACXT is the biggest architecture group in Spain and one of the few worldwide with such a radical multidisciplinary approach. The

ACXT offices are located all over the world: Barcelona, Bilbao, Lisbon, London, Madrid, Mexico, Pamplona, Santiago, Santiago de Chile, Sao Paulo, Seville, Valencia, Vitoria, Zaragoza, etc. Over the last years ACXT has been very active in international projects, working in Beijing, Tripoli, Misratah Morocco and the South American countries.
